

My design choices, challenges faced, and how you addressed them.

The designs I chose to use were rather simple and used a base block color in order to make it easy to read for most people. The biggest challenges that I have faced was adding an image to the portfolio and adding to the projects folder.

For the projects tab I was struggling to add onto them as I lost a lot of my previous work from earlier in school years as my computer had crashed and I did not have any access to prior projects that I had done. Another challenge that I faced was getting the submit form to work or post the input from the user end of things.

Not being able to add more transition animations was a task for me and I did simple ones that I was able to handle. Having to post the website on GitHub was also a big challenge for me that I am yet to know how to overcome.

How I Overcame some of the challenges I faced

I was able to overcome the problem of the adding an image by selecting the desired path that I had in the folder for the said images. I had previously input the wrong path and I figured out what to do instead.
